

SEED TREATMENT EQUIPMENT S36

The seed treatment equipment, type S 36 (patented system), is made to perfectly achieve two essential operations:

- To coat the seeds with a liquid protective product in an homogeneous and regular way
- And to adjust humidification on each seed to ensure a good holding of the treatment product.

News :

- Capacity up to 6 tm/h.
- Feeding height preserved (1,24 m)
- Possibility of filling big bag or container (Height 2,13m in single output □160 mm)
- Possibility sacking small bags 50 kg with a screw shorter (option)
- Lift cylinder to assist in cleaning the screw during low position

It offers the following advantages:

Reliable and performing: tipping system with mechanical meter, ensuring an accurate feeding, electric pump to secure a steady flow and exact dosage, mixing screw with ribbon flight (provided with a rubber protection for delicate seeds) and low-rotation speed to allow uniform mixing and reduce wear.

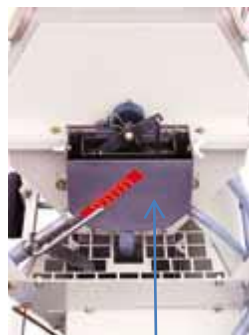

Functionnal and modular: equipment mount on mobile chassis (on retractable wheels when the machine is working - Throughout with 2 ways valves (option) - Feeding hopper with shorter height. Electric starter set included.

Robust and secure : solid construction - Screw Threads fully realized and rectified in our workshop – dosage container completely in stainless steel - electric pump specially adapted treatment products

Options: Feeding hopper with shorter height, throughout with 2 ways valves and container

Adjustable tipping and weighing box,

Dosage container

Tank with electric pump

Retractable wheels

CE This equipment meets with the standards for safety and strength
