

DENiS

EXPERIENCE AND RELIABILITY

Our expertise

The design and manufacture of equipment for continuous mechanical cleaning and bulk solids handling.

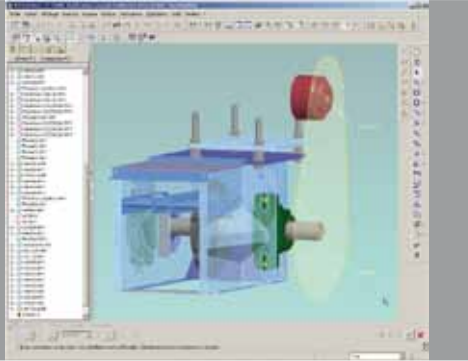

Since 1855, DENIS has built up an international reputation in our specialist fields, based on a thorough understanding of the processes our customers use in their various trades. The standard equipment that we manufacture in quantity is intended for the particular needs of the markets we serve.

We manufacture 5 000 to 6 000 items of handling and cleaning equipment a year on a range of leading-edge machines in a facility of more than 22 000 m² (230 000 sq ft) located on an industrial site of 8 hectares (20 acres). The drive and motivation of the whole DENIS staff are at your service.

Make use

of the know-how of a bulk handling specialist to value your productivity.

At DENIS, we have our own design departments

Eighteen engineers and technicians work in two design departments equipped with powerful computer facilities.

- The "installations" design department enables DENIS to offer its customers an engineering team to work with the installer or plant designer to provide assistance with planning and installation.
- The "production" design department, with the help of a prototypes workshop and a test center, is in charge of the construction of equipment, special designs and the development of new machines.

A quick and efficient after sale service

The after sale department is staffed by qualified personnel who are aware of the sort of problems connected with production and operations. Its mobility enables them to provide support for the technicians, to ensure that the equipment we have supplied renders continuous operation.

Commercial and technical support in France and throughout the world

Eight customer representatives, specialists in technical sales, cover France where a network of 380 points of sales and 100 qualified installers provide advice, distribution and service close at hand for assembly and maintenance.

DENIS has an export department backed up by 4 engineers and represented in 40 countries by our subsidiaries or agents.

Our commitment

For the 200 DENIS staff, your satisfaction is the most treasured reward.

We will spare no effort to meet your requirements by meeting your deadlines in order to contribute to your success.

Products - markets

We at DENIS have developed our products and services around the grain and feed sector and the industrial sector.

◆ Grain and feed

Continuous handling, storage, discharge of bins and silos, cleaning, separation, treatment and protection of grain, mobile handling, etc: whichever operation you require, DENIS has competitive products for you, allowing throughputs from less than one ton per hour up to 300 tons per hour.

Extensively proven and tested DENIS technology can provide you with systems for emptying bins using sweep augers. This type of equipment empties the residual cone in a single pass at flow rates of up to 300 tons per hour (Gravity flow rates of up to 600 tons per hour are possible).

A complementary device, automatic and safe, the sweeping brush, mounted on a sweep auger ensures the complete cleaning of the silo floor and avoids manual sweeping, long and difficult in a dusty environment.

Co-Ops

Handling equipment and accessories for up to 300 tons per hour: our engineering skills at your service.

Farms

Large scale or polyculture, livestock: a full range of silos, inside and outside, "anti-cross contamination" metallic floors ensuring the conservation and value of cereals and cleaning & handling equipment for grains, adapted to your needs.

d two markets:

Seed

In this very specific area, product quality determines your final productivity and the value of your harvest. DENIS has a complete range of specialized equipment for the cleaning, treatment and handling of seed. Suitable for slow-speed working and designed to ensure reduced residuals, they guarantee transport without damage and safeguard the quality of your seed.

Milling

DENIS has developed a complete range of equipment suitable for the milling industry: for handling, cleaning and extracting raw materials, flours, by-products, wastes, etc. Fitted with non-toxic quality coatings or components, they work at an appropriate speed and have settings and sealing complying with the demanding norms of this profession.

Animal feed

Intake, handling, dispatch, etc. of seed, oil cake, flour, premix, etc., prior to and following processing and conditioning.

◆ Industrial sector

In the field of minerals and carbonates, DENIS offers a range of industrial products and know-how for use in your processes.

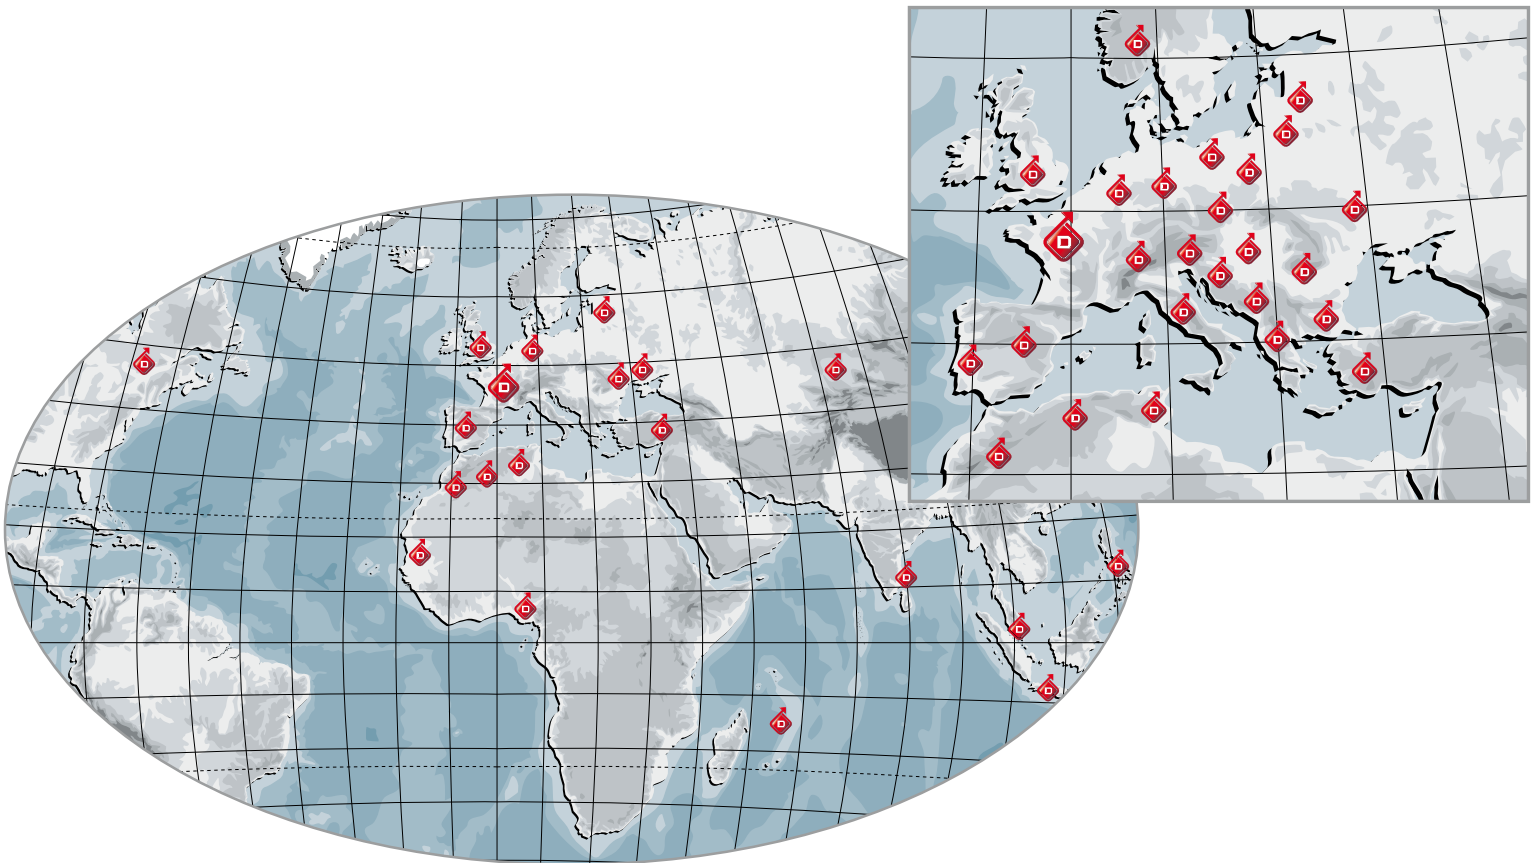

Covering solid fuels (wood, coal, etc.), agro-food industries (salt, coffee, cocoa, dried vegetables, spices, etc.), plastic, and the chemical industry, waste recycling: our business is handling and sorting your raw materials and your finished products.

DENIS has a complete range of solutions for handling, extraction, cleaning, separation, etc. up to 400 m³ (14 000 cu ft) per hour.

A worldwide presence

The DENIS headquarters are located between the Beauce and the Perche region, 40 km from Chartres, 70 km from Orléans, 120 km from Paris or 1.30 hour by car on highway A11, exit N°4 Brou-Chateaudun. Daily train connections from Chartres and Paris.

The DENIS sales representation provides with high quality products and services all around the world.

Our commitment

◆ Long-term performance

The industrial construction of DENIS equipment from standard components enables installations to be modified, extended or modernized in any way. In addition, their modular construction allows you to add to them without replacement of the existing equipment.

◆ Quality Assurance

Compliance with the highest standards and requirements, with relation to the mechanical design, the supplying of raw materials and components, and the attention given to the finish and surface coating : degreasing, corrosion phosphating process, protection through primary coat and application of an oven-baked enameled paint with guaranty of 400 hours of protection in saline spray (against 240 hours in galvanized steel Z350), all these elements allowed company DENIS to fully satisfy its customers expectations and needs.

Constantly attentive to them, DENIS, by its commitment to a quality approach, targeting the continuous improvement of the equipments produced, has been granted ISO 9001 certification since 1998.

Conformity with these high-level requirements and their constant improvement ensure that DENIS installations remain of undisputed quality. DENIS also takes into account the environment protection and focused its efforts in controlling the polluting rejects, reducing metallic wastes and waste management.

◆ Customer service - our priority

Thanks to mass-production techniques, some 30 000 DENIS catalogue items are available from stock and can be delivered in record time. The presence of a competitive marketing network close at hand enables you to benefit from the experience and know-how of a leading manufacturer.

◆ Unbeatable competence

Specialists in the handling and cleaning of bulk solids, the DENIS engineers and technicians will recommend the most suitable equipment and the best designed installation for your intended application.
